Autor Post: sairah, mar 22Q: How to plot circular plot on matlab I have an observation matrix 'M' which contains a year and a product and the value as a function of the product and the year. For instance, M = [10.4 9.8 9.3 6.2 8.6 2.5 7.4 1.6 2.1 5.2 5.1 4.8 4.9 6.2 7.6 5.1 5.3 6.6 9.1 4.9 3.7 5.6 3.8 2.9 6.9 5.3 5.1 6.4 6.3 6.1 7.1]; It is saved in matlab as a CSV file. I want to plot each value of M on a circular plot like on the figure below. Could you please help me to do this? A: You can do something like this: figure; hold on; plot(pi*(1:size(M,2)),M(:,2),'r'); plot(pi*(1:size(M,2)),M(:,1),'b'); In vitro effect of alpha-tocopherol, onca and pefloxacin on osteoblasts. Bones are an integral part of the body's defense mechanism against microbial invasion. This study was designed to evaluate in vitro the effects of alpha-tocopherol, onca, and pefloxacin on osteoblasts, a bone-forming cell. The alpha-tocopherol and onca stimulated the proliferation of osteoblasts in a dose-dependent manner. The alpha-tocopherol, onca, and pefloxacin also enhanced alkaline phosphatase (ALP) activity. The osteoblasts produced more calcified matrix than control osteoblasts after treatment with onca and pefloxacin. Pefloxacin was more potent than onca in its stimulating effect on the osteoblasts. Results of this study suggest that alpha-tocopherol, onca, and pefloxacin may be potentially useful in the treatment of various infectious diseases of the skeleton.A second mutation of the AIDA-1 gene in a family with high susceptibility to viral haem
